

We are Daiichi Sankyo.

Every cancer journey is a unique and personal experience for patients and very complex to be fully understood. We know that every cancer patient may also be a mother or father who want to see their children smile. A partner, a friend, a daughter, a son who long to kiss and hug their loved ones. It is with this knowledge that we conduct our science and research to see another warm embrace, another smile or touch – we know how much they matter. A cancer diagnosis should not be the end of these essential moments. That is what we believe in and why we work relentlessly to answer patients' needs in the best possible way.

Our purpose

To contribute to the enrichment of quality of life around the world.

Our mission

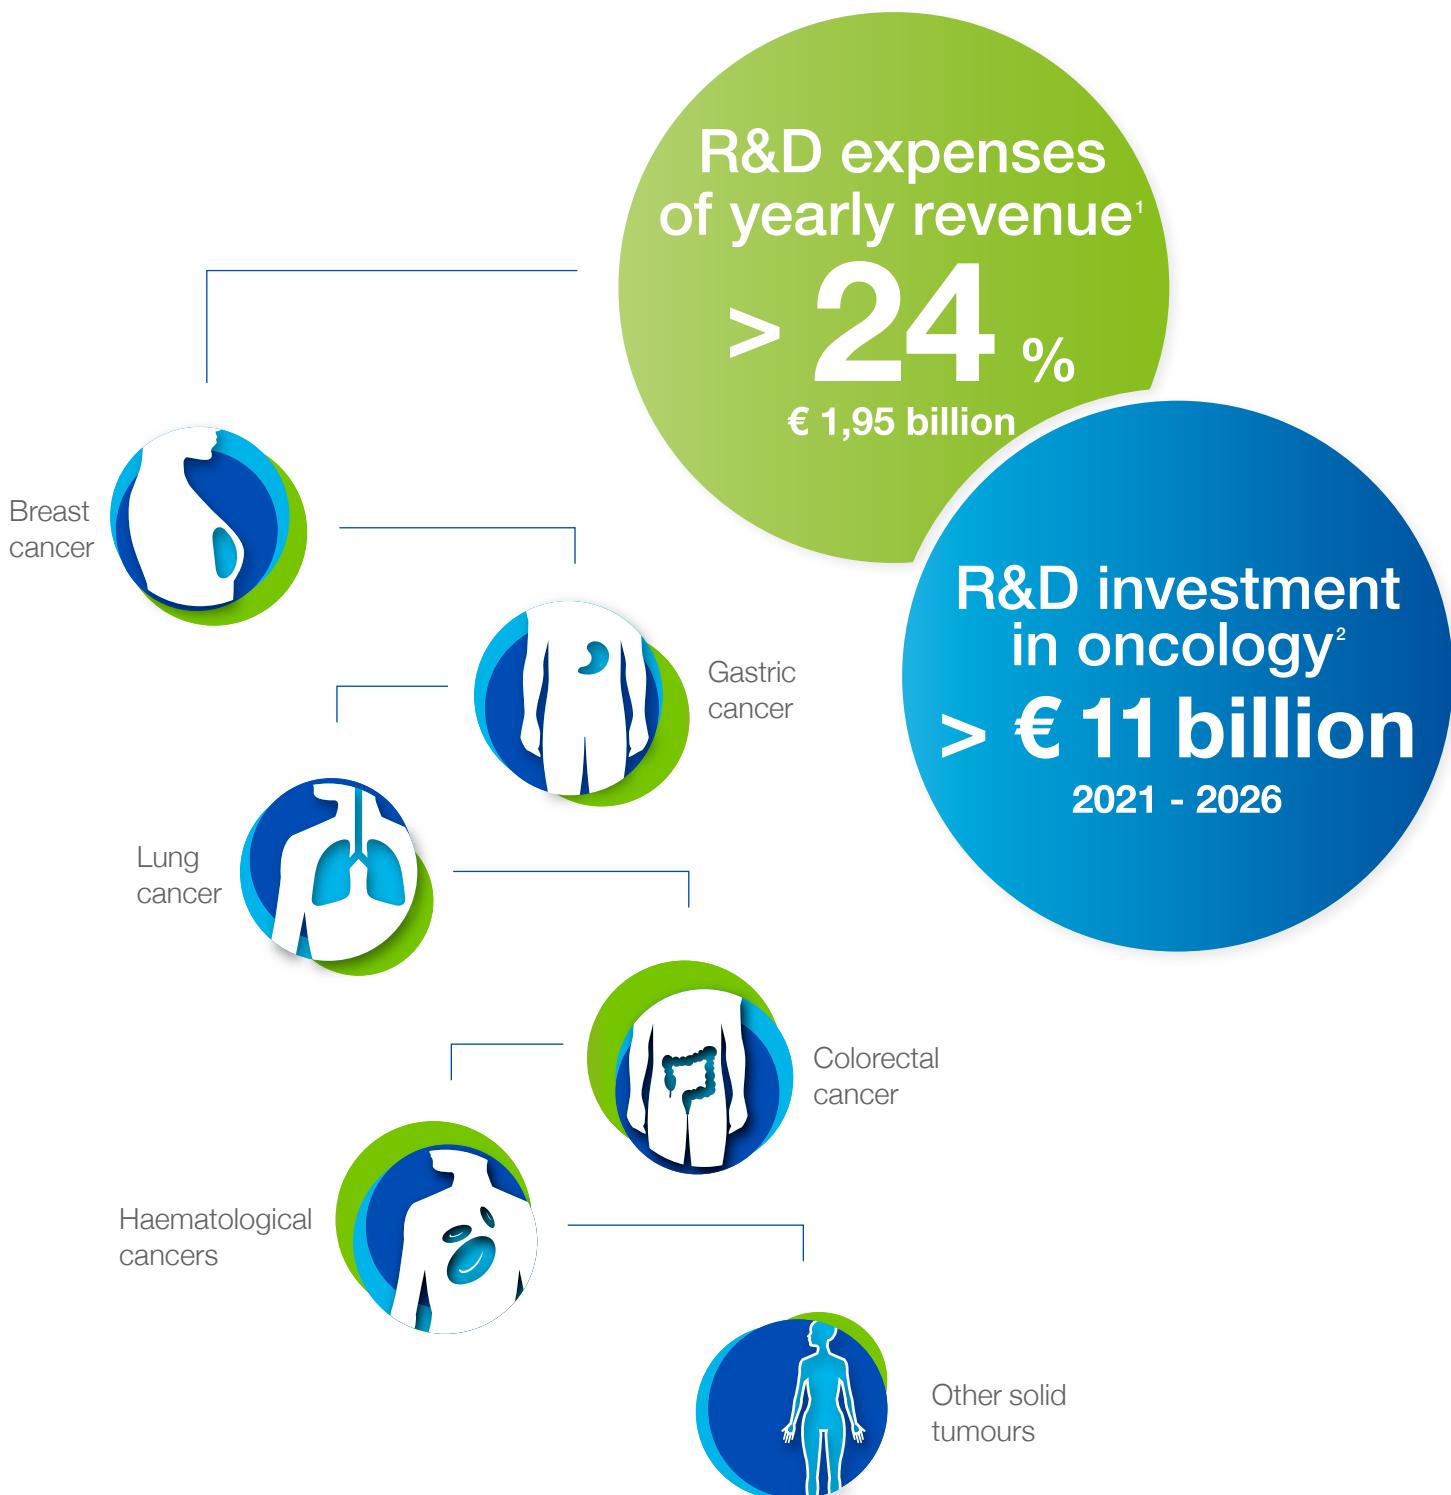

To create innovative pharmaceuticals addressing diverse medical needs.

Our vision

To become an innovative global healthcare company contributing to the sustainable development of society.

Our disease areas

With passion for true innovation we seek to transform standards in cancer patient care. All our scientific and research efforts seek to address areas of unmet medical need. By 2025 we want to become a global pharma innovator with competitive advantage in oncology and a trusted partner to the patient communities we serve.

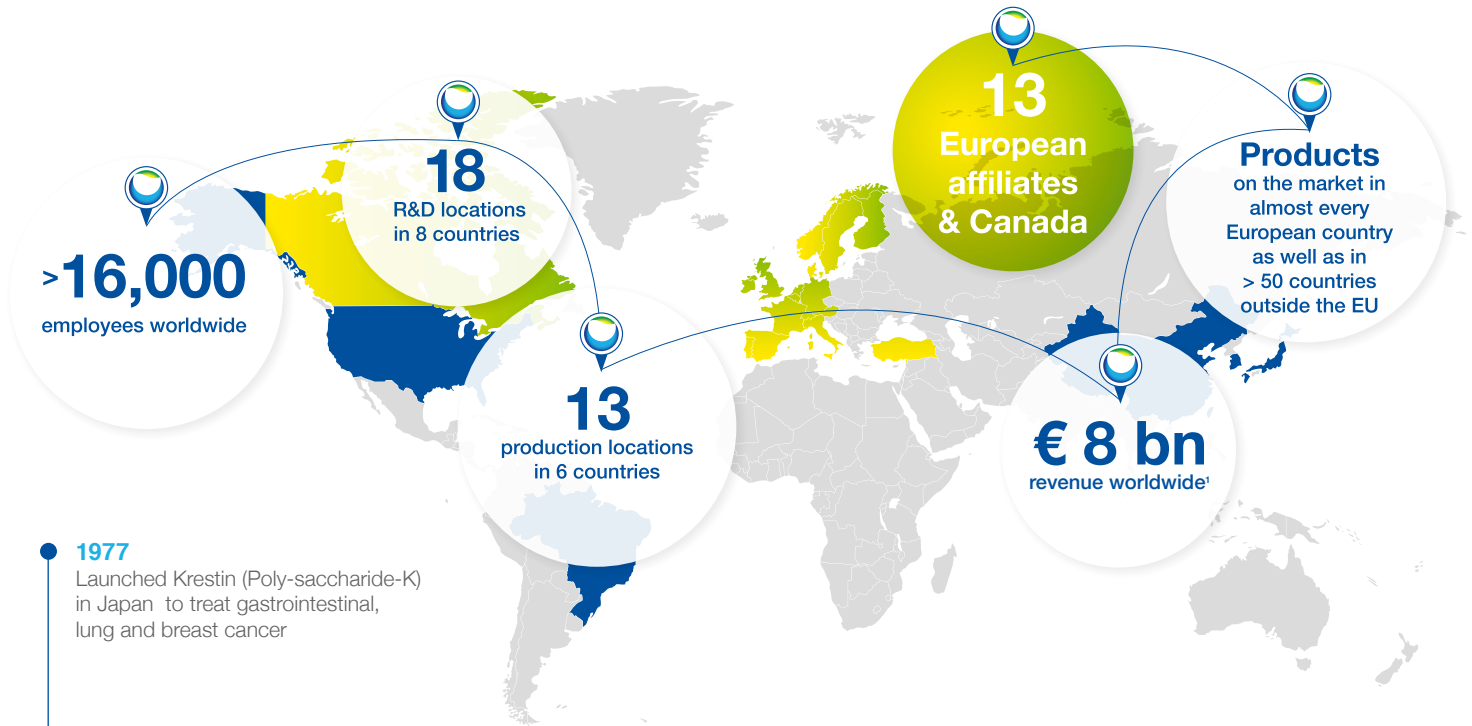

R&D: Research & Development
