

Energy policy of Daiichi Sankyo Europe GmbH

We hereby commit to reducing our energy consumption in the long term and increasing our energy efficiency in a continuous improvement process. To realise these goals, we are introducing an energy management system in accordance with the DIN EN ISO 50001:2018 standard. In doing so, we ensure that all requirements of this standard are implemented correctly and that the processes within this energy management system are continuously improved. We will also regularly check that

- our goals and energy targets are defined, implemented and adjusted if necessary;
- the necessary information and resources (financial, structural) are secured
- relevant legal obligations are taken into account;
- when purchasing products and services, we favour those that enable us to improve our energy-related performance wherever possible;
- all employees are integrated into the implementation and execution of the energy management system and responsibilities are defined;
- energy influencing factors and energy data are regularly determined and reviewed;
- energy efficiency programmes are implemented and executed correctly;
- the energy management system is continuously developed and improved;
- design-related activities are supported that consider the improvement of energy-related performance;
- the results are measured and reviewed by means of a regular audit.

Munich/Pfaffenhofen, 19.03.2025
